

**Dear Hiring Manager,**

I am writing to express my strong interest in the Junior Software Developer position at Smart IS, as advertised on your careers page. As a recent Computer Science graduate, I have followed Smart IS's reputation for excellence in warehouse and supply chain transformation, and I am eager to contribute to a team that balances global expertise with a strong local presence in Rawalpindi.

My academic and project experience has been defined by a "builder-first" mentality. During my time at university, I focused on developing scalable applications, ranging from AI-powered networking tools to event-driven microservices. I have gained hands-on experience in Python, SQL, and database management, and I am highly proficient in the modern tech stacks such as Docker and various web frameworks that your team utilizes to deliver enterprise grade solutions.

I am particularly drawn to this role because it offers the opportunity to work in a dynamic, innovation-focused environment. Whether it is troubleshooting complex applications, optimizing database queries, or participating in collaborative code reviews, I am prepared to apply my technical foundation to support your mission of modernizing mission-critical operations.

Thank you for your time and consideration.

**Sincerely,**

**Saim Haider**
